

## Oracle Server Backup

### Enterprise class online backup solution for Oracle databases

- ⌚ Automated, reliable and secure offsite backups
- ⌚ No interruption of running services

### The scenario

Backup and recovery is key to managing Oracle databases that typically hold vital business, financial, employee and customer records. These are gathered over the life span of the business, and important for its day-to-day functioning, as also deciding the future roadmap.

In addition, with corporations having a global footprint and operating across time zones, there is a real need for 24 x 7 availability and access to the databases. This poses the challenge of its management with zero downtime. Virus attack, theft, sabotage, natural disasters are potent threats that can paralyze your Oracle database and bring down your business by causing loss of customers, monies and credibility

*When your business pivots around your database, can you afford to take a chance?*

### IBackup for Oracle Server backup and restore

IBackup guarantees business continuity at all times by ensuring availability to mission critical data. No matter what size it is, our infrastructure and software are geared up for backups and restores of running Oracle database (Oracle 9i/10g), without interrupting the services.

### The IBackup advantage

#### Reliable

Automated backup of running MS SQL server databases.

#### Safe

Encrypted data transfer and storage with a user defined key for complete data protection.

#### Scalable and cost effective

Scalable as your business needs expand; requires no additional hardware/software.

#### Physical data shipment

Transfer several gigabytes of data, within a week or less, via physical shipment storage.

#### Support

24 X 7 support over chat, email or telephone.

If business isn't just 9 to 5 anymore, when can you backup your back office server?

## Features

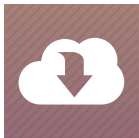

### Flexible

Backup of your Oracle database need not be monitored all the time; just schedule and forget

### Secure

Data is secured with 256-bit AES encryption on transfer and storage with a user-defined key

### Restore with ease

Restore an earlier backed version of your database

### Quick

Wire compression and bandwidth throttling for fast backups

### Simple scheduling

Interactive database backups or schedule for the future

### Intuitive

Available GUI guides you step-by-step through backup and restore

### Notifications and Logs

Desktop and email notifications on completion of backups. View log reports on the status of backup and restore jobs

### Multiple Operating System support

Windows 8, 2000, XP, Vista, Windows 2003 and 2008 server

## IBackup Express

For quick initial backup of several gigabytes of data, IBackup provides for a physical transfer of data via a temporary storage device, shipped by IBackup to you.

To transfer your Oracle Server databases to the external device, use the IBackup Portable application.
